Liveable = Walkable

“Walkability is **the extent** to which the built environment supports and encourages walking by providing for pedestrian comfort and safety, connecting people with varied destinations within a **reasonable time and effort**, and offering visual interest in journeys throughout the network”

Michael Southworth
Professor Emeritus City and Regional Planning
UC Berkeley

A Walkable City

A walkable City supports all the people walking already AND entices more short distance trips to be walked by people who have a choice to motorise instead.

What do we need to know?

	QUESTION	MEASURE
1	How much are people walking?	Activity
2	Is it safe to walk?	Safety
3	Are people within walking distance of public transport?	Accessibility
4	Is it comfortable to walk?	Comfort
5	Is there policy to support walking?	Policy
6	How satisfied are people with the walking experience?	Satisfaction

3. Accessibility

- % of people within 500m of **public transport** (SDG11.2)
- % of people within 500m of **key places** where people are walking most

4. Comfort

% of streets with minimum pedestrian standard:

- Space to walk
- Safe crossings
- Appropriate speed

6. Satisfaction

Give communities the opportunity to **map their concerns** with the existing walking experience so that authorities can **respond and quantify the impact**.

8 Steps to Walkable Cities

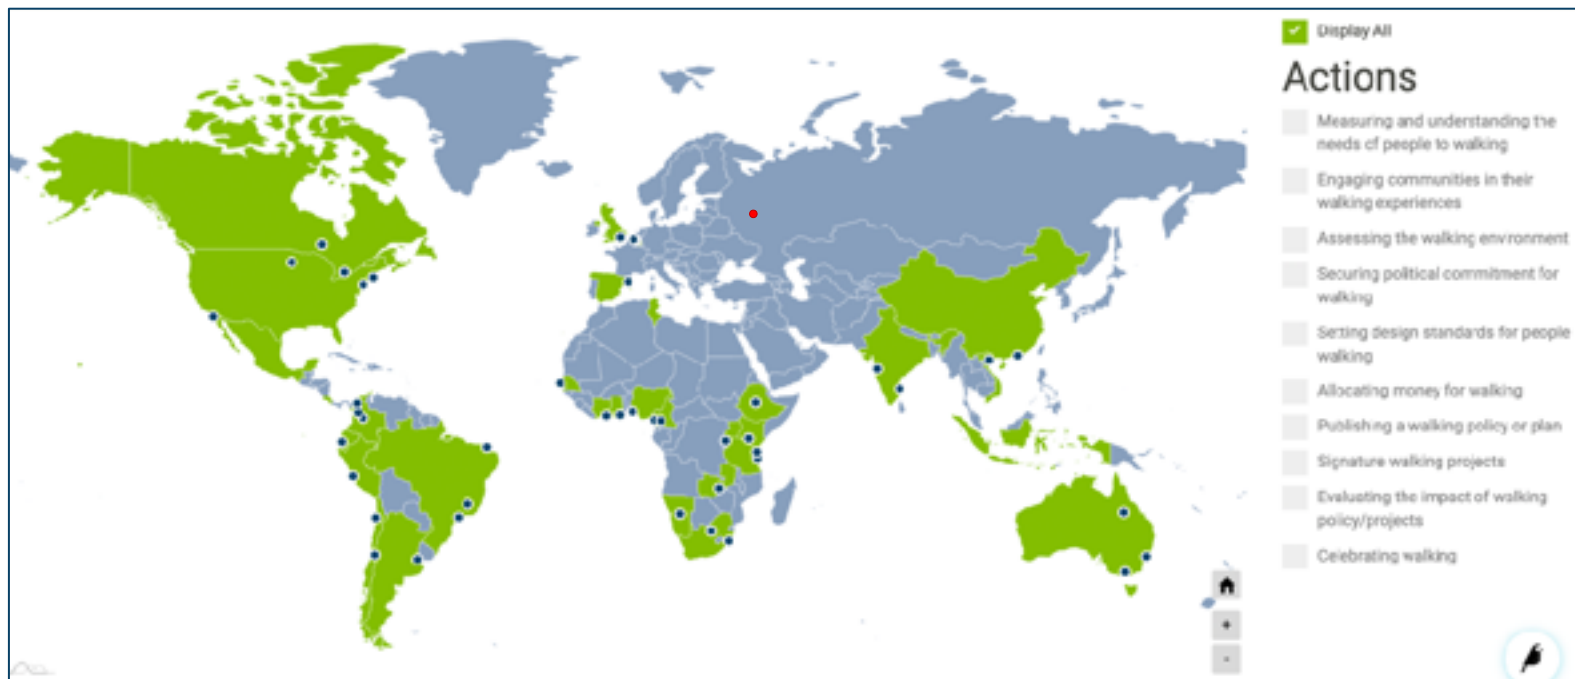

Next Steps

1. **Invite the Mayor** to sign the International Charter for Walking
2. **Collect data** for the indicators
3. **Invite citizens** to map the cities walkability
4. **Engage those with responsibility** for walkability in a workshop
5. **Plan to** gain momentum for longer term and permanent changes and investment.

Pathways to Walkable Cities *(coming soon!)*

Thank you!
